

**Name :**Kuruva Yokesk Kumar

**Roll No :**20X01A6705

**Branch :**CSE(DS)

**Year :**Final Year

**College :**Narasimha Reddy Engineering College.

**Project Titel:** Make the prediction for "iris.csv" using kNN algorithm to find value of x for supervised learning.

```
from sklearn.datasets import load_iris
from sklearn.model_selection import train_test_split
from sklearn.neighbors import KNeighborsClassifier
from sklearn.metrics import accuracy_score

# Load the Iris dataset
iris = load_iris()
X = iris.data
y = iris.target

# Split the dataset into training and testing sets
X_train, X_test, y_train, y_test = train_test_split(X, y,
test_size=0.2, random_state=42)

# Create a kNN classifier with k=3
k = 3
knn_classifier = KNeighborsClassifier(n_neighbors=k)

# Train the classifier on the training data
knn_classifier.fit(X_train, y_train)
```

```
KNeighborsClassifier(n_neighbors=3)

# Make predictions on the test data
y_pred = knn_classifier.predict(X_test)

# Calculate accuracy
accuracy = accuracy_score(y_test, y_pred)
print(f"Accuracy: {accuracy:.2f}")

Accuracy: 1.00
```

**Conclusion:**In this model  $k=3$ .

So it is successful.
